Business Challenge

Business challenge: ✕

- Thousands of customer reviews cannot be analysed manually
- Star ratings don't explain why customers are dissatisfied
- High-risk complaints can be missed, delaying corrective action

Project Objective

If you had 158,000 customer reviews, could you identify the five reviews that can hurt your brand the most in under a minute?

Project goal:

Create an interactive dashboard that allows users to:

- Monitor product performance
- Explore customer feedback
- Identify reputation risks
- Support data-driven decision making

Table of contents⁺

- Data enrichment & NLP Pipeline
- Dashboard Overview
- Live Demonstration
- Business Value & Future Enhancements

Data Enrichment & NLP Pipeline

Raw Data

- Product
- Brand
- Rating
- Review Text
- Review Date
- Helpful Votes

NLP-Derived Insights

- Review Categories
- Specific Findings
- Sentiment

Engineered Variables

- Escalation Score
- Risk Level

Decision-Support Dashboard

Dashboard Overview

1

Product Analytics

Monitor
review trends and
track the best- and
worst-rated products
and brands

2

Voice of Customer

Explore
what customers
praise and complain
about most

3

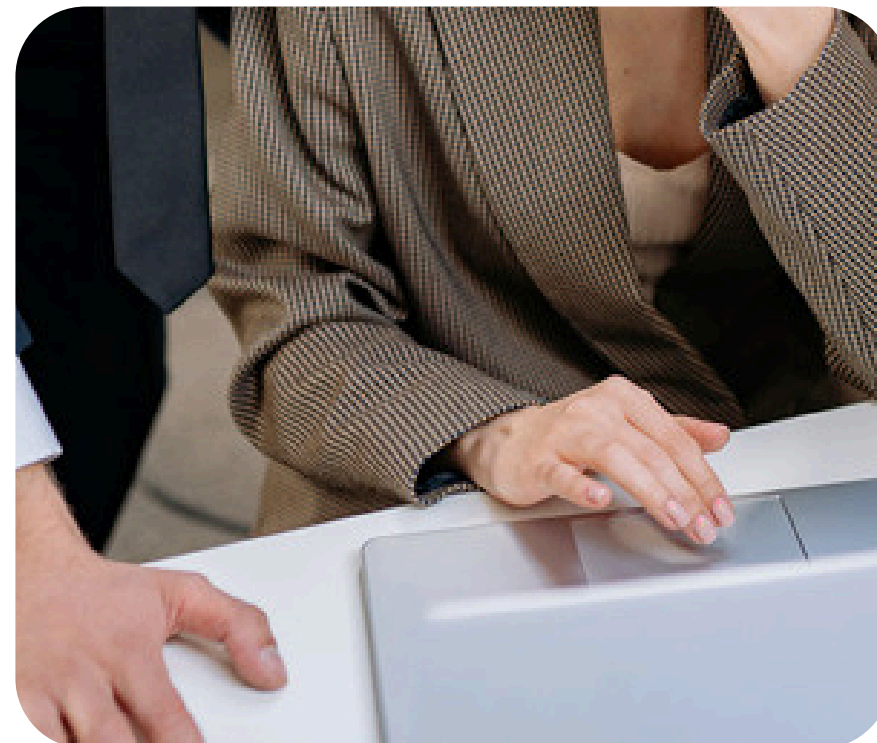

Risk Monitoring

Identify
reviews requiring
immediate attention

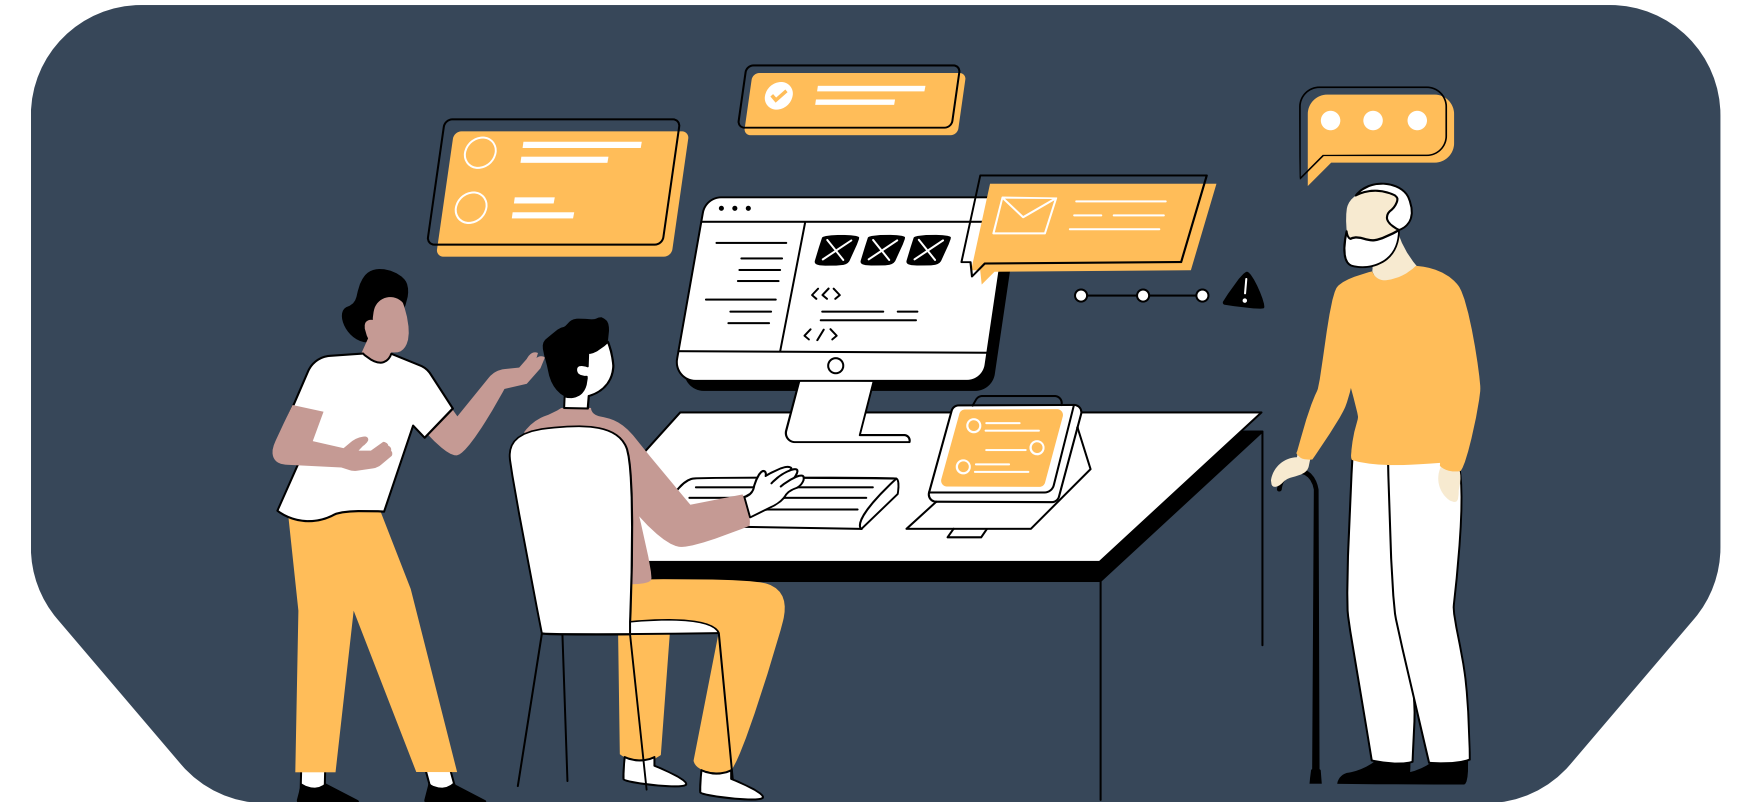

Live Demo

Let's have a closer look!

- 1 → Product Analytics
- 2 → Voice of Customer
- 3 → Risk Monitoring

Business Value & Future Enhancements

Business Value

- Reduce manual review effort
- Prioritise high-risk customer feedback
- Identify recurring product issues
- Support faster product and service improvement decisions

Future Enhancements

- Advanced NLP or richer dictionaries
- Predictive analytics
- Automated risk alerts
- Expanded data source

Today, the challenge isn't a lack of data.
It's transforming overwhelming amounts of
information into decisions.

Thank you, Ironhack!
